

## ATE Learning Resources

### Mole National Park, Ghana

Mole National Park is the largest and most prestigious protected area in Ghana, in the north-west of the country, and is Ghana's largest wildlife refuge, measuring 4,849 square km. The park has very rich flora and fauna. It is best known for its elephants (a population of about 600) as well as many other primates. (Source: VisitGhana.com)

### Animals

Some 94 mammal species, over 300 bird species, 9 amphibian species and 33 reptile species have been recorded in Mole. The large and commonly seen mammals include elephant, kob, roan antelope, hartebeest, waterbuck, bushbuck, warthog, buffalo and baboons. Predators include lion, leopard, spotted hyena, caracal, aardvark, genet, civet and mongoose. Occasionally, buffalo overrun the park headquarters and the lodge area! (Source: VisitGhana.com)

### Tasks!

- **Task 1:** Make a poster to advertise Mole National Park to visitors, with some of the information on and drawings of the animals people might see there!
- **Task 2:** Pick one animal that can be found in Mole National Park, ask an adult for some help on researching it, and make a fact sheet about it!

**Good luck!**
